

The Broad Top coal field of Huntington, Bedford and Fulton counties

By James Henry Gardner

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 30 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1913 edition. Excerpt: . . . and operators of (c) Willis, Baily. The Mechanics of Appalachian Structure. u. S. Geological Survey, 18th Annual Report, Pt. 2. the field naturally think of the synclines, or basins, as the principal structures; the mines are laid out lengthwise along the basins with headings running back to the steep crests of anticlines on either side, and for this reason the anticlines are considered as the limiting factors in taking coal from the basins. Consequently those interested in mining coal from such a region have their attention attracted to the continuations of the basins as the essential structures, though the anticlines are, of course, parts of such folds, but the miners give names to the basins rather than to the anticlines as will be seen by reference to the cross-sections. Plate XXIII. Across the west side of the Broad-Top field the basins are remarkably persistent,...
