OF, OF are double tangents to a bicircular quartic, having (2) for a circle of inversion, and (3) for the corresponding focal conic. See Prof. Caseys paper on Bicircular Quartics, Art. 47 It remains to show that F, V are points of contact. If p be the perpendicular from O upon the asymptote, and r the distance from O of a point of contact of the double tangent OF; then, since the two points of contact are inverse with respect to (2), and are also equidistant from the asymptote Iprr- o2 0t y. Now, taking the asymptote 2ox 2 and y y c---2cx--0, --i2at 2B1 y c-2ca OF- a3 g2 7. P 2 (-) 01 2OF hence F is one point of contact of the double tangent. The latter part may be otherwise proved as follows: --The sixteen points of contact of the eight double tangents of a bicircular quartic lie by fours upon four concentric circles; the common centre being the centre of the focal conies, and each circle cuts orthogonally one of the circles of inversion. Hence the points of contact of tho double tangents OF and O B lie upon the circle and this circle evidently passes through F, F. 5083 and 5180. (By Prof. WolstenHolme, M. A.)--A bicircular qnartic whose real foci lie on a circle is the locus of a point P, which moves so that the ratio AP. BP: CP. DP is constant, A, B, V, D being four...
