These preliminary steps in the development of a new species can only be observed in living organisms, and in our laboratory methods of studying dead organisms we may fail to distinguish species that are clearly distinct in habits, functional activities and powers of adaption from their resemblance in external or morphological characters. In the geographic distribution of species there must be a balance of organisms in conformity with the mutual needs of competing species under the prescribed conditions, as is strikingly illustrated in the results of the introduction of the mongoose in the island of Jamaica. (V. Science, Vol. 5, p. 15, Jan. 1, 1897.) With the decline and final disappearance of the discomfited species in the struggle for existence from their inability to adapt themselves to the changed conditions they have aided to bring about, there must be an...
