

Diversity and Distribution of Forest Biodiversity in Western Uganda

Filesize: 3.14 MB

Reviews

It in one of the best book. Better then never, though i am quite late in start reading this one. You wont feel monotony at at any moment of the time (that's what catalogues are for regarding in the event you check with me).
(Dr. Kristin Dickens)

DIVERSITY AND DISTRIBUTION OF FOREST BIODIVERSITY IN WESTERN UGANDA

[DOWNLOAD](#)

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | The Diversity and Distribution of Trees and vascular epiphytes in Western Uganda Forests, in relation to the Environment | Forest Plant diversity is quite high in western Uganda forests, affiliated to the forests of the Congo basin that are relics of the postulated late Pleistocene refugia. The diversity of both trees and vascular epiphytes is mainly influenced by Soil pH, Annual Precipitation as well as Altitude. For epiphytes, the total annual precipitation is not just important, but also its distribution throughout the year as they depend on the availability of moisture in the air around their "host trees" (phorophytes) unlike trees which can withstand longer periods of drought after establishment as their roots are in deeper soil layers where local drought may not affect them. Forests located within close proximity of permanent rivers tended to have a higher epiphyte diversity (both in species and numbers) than those that experience severe drought. Some trees are more specialized to survive in Acidic soils, while others are adapted to survive in more or less neutral soils. There was no significant difference in tree diversity between forests with highly acidic soils and those with almost neutral soils. The book is handy for Foresters, Botanists, Conservationists and Naturalists | Format: Paperback | Language/Sprache: english | 329 gr | 232 pp.
