Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from Shark Slough Water Level Correlation Analysis: Report T-618 Determining water levels throughout Shark Slough is a difficult task owing to the large extent of the system acres) and much of its area is accessible only by helicopter or airboat. Shark Slough undergoes seasonal variations in stage, areal extent of inundation and hydraulic gradients which necessitate year-round monitoring of water levels. For over two years, members of the South Florida National Park Service Hydrology Research team have monitored a long-term continuously recording water level network as well as a dense supplemental network of staff gauges throughout Shark Slough providing information on water stages at remote locations. Because of the expense involved in monitoring these gauges, it is desirable to be able to estimate water stages at various points in the slough based upon measurements taken at a few representative continuous gauges. This report presents the results of a correlation study of the Shark Slough water level gauge system which provides equations for estimating water levels at most of the staff gauge locations in the slough. Included are suggestions as to which continuous gauges are most valuable for defining water level relations in Shark Slough. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to...
