Springer-Verlag GmbH Dez 2008, 2008. Buch. Condition: Neu. Neuware - During the last decades, geosciences and engineering were influenced by two essential scenarios. First, the technological progress has changed completely the observational and measurement techniques. Modern high speed computers and satellite-based techniques are entering more and more all (geo) disciplines. Second, there is a growing public concern about the future of our planet, its climate, its environment, and about an expected shortage of natural resources. Obviously, both aspects, viz. (i) efficient strategies of protection against threats of a changing Earth and (ii) the exceptional situation of getting terrestrial, airborne as well as spaceborne, data of better and better quality explain the strong need for new mathematical structures, tools, and methods. In consequence, mathematics concerned with geoscientific problems, i.e., geomathematics, is becoming more and more important. Nowadays, geomathematics may be regarded as the key technology to build the bridge between real Earth processes and their scientific understanding. In fact, it is the intrinsic and indispensable means to handle geoscientifically relevant data sets of high quality within high accuracy and to improve significantly modeling capabilities in Earth system research. 602 pp. Englisch.
