A peculiar condition under which erosion may be expected was called to the attention of the writer in southern California. Unless pipe lines are laid on a smooth gradient, any sand in the water will wear out the bottom of the pipe where the latter goes over humps. The obstruction of a pipe by lime deposit is mentioned by W. E. Condon.³ (See Plate I, figure 2.) CAPACITY OF CONCRETE PIPES. In the following pages the design of concrete pipes is considered with reference to carrying capacity alone. Structural features do not come within the scope of this paper, except as they affect the interior surface. The total loss of head necessary in the conveyance of a given quantity of water will be the sum of the velocity head, h_v , the entry head, h_e , and the friction head, h_f , or its equivalent per unit length, less any velocity head, V_v , that may be recovered as the water 1 Safe Velocities of Water in Concrete, by A.
