To get **Memoires Et Correspondance de Duplessis-Mornay Pour Servir A L'Histoire de La Reformation Et Des Guerres Civiles Et Religieuses En France, Sous Les Regnes de Charles IX, de Henri III, de Henri IV Et** PDF, remember to refer to the link below and save the file or gain access to other information which might be in conjunction with MEMOIRES ET CORRESPONDANCE DE DUPLESSIS-MORNAY POUR SERVIR A L'HISTOIRE DE LA REFORMATION ET DES GUERRES CIVILES ET RELIGIEUSES EN FRANCE, SOUS LES REGNES DE CHARLES IX, DE HENRI III, DE HENRI IV ET ebook.

RareBooksClub. Paperback. Book Condition: New. Paperback. 92 pages. OCLC Number: 52112968 Excerpt: . . . The wicking pore throat structure provides a flow path for the separated liquid phase. Two mechanisms are required for the device to operate effectively, a wicking mechanism and a mechanism for excluding gas. The wicking mechanism is accomplished by a porous structure that is wetting for the liquid in order to cause preferential sorption, while having high permeability to provide flow capacity to the outlet. The second mechanism is also required to prevent intrusion by the gas stream into the liquid outlet channel, and is accomplished using a pore throat. The bubble point of the pore throat, as dictated by the maximum pore size, contact angle, and surface tension of the liquid, determines the maximum allowable pressure differential between the gas and liquid outlets. The wick and the pore throat can be embodied in the same component or structure. The purpose of the testing reported here is to determine the performance characteristics of the architecture, to identify key principles and parameters, and to develop scaling relationships. The processing capacity of the device is constrained by a number of parameters, some of which are explored by the test results presented below. The failure modes are breakthrough of the liquid phase into the gas outlet and intrusion of gas into the liquid outlet. The longer-term objectives are to determine the residual effects of Earth's gravity and the importance of unmasked phenomena. One of the factors limiting the processing capacity of the device is how effectively the liquid phase is brought into contact with the wicking structure. For an open rectangular microchannel, this removal effectiveness is expected to depend on the flow regime encountered in the device. Annular and stratified flow will bring the liquid into contact with...
