If each of two unequal magnitudes can be expressed numerically to any required degree of nearness in reference to a common unit magnitude their difference may be expressed numerically to any required degree of nearness in reference to that unit magnitude. In reference to one unit magnitude let the greater of two unequal magnitudes be not less than $a - K$ and not greater than $a + K$ and the less not less than $a - K$ and not greater than $a + K$ where a , K are numbers of which both K and K may be less than any given number however small. Then (art. 242) K K may be each taken so small that each of the numbers $a - K$ $a + K$ is greater than each of the numbers $a - K$ $a + K$. Hence (art. 103) taking K each thus small the difference of the unequal magnitudes...
