Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*. Excerpt from Illinois Tech Engineer, Vol. 12: 1946-1947 By means of a fine ruled screen in the camera in optical relationship to the lens and its diaphragm and the photographic emulsion, the tones of the original print are translated into so-called dots of varying areas. A light sensitive resist on a zinc or copper plate, after exposure and development permits, with considerable hand work, etching of the metal; and dots of variable area are produced, which when transferred to paper by the printing process are translated by the eye into a replica of the original print. Photographic means for separately recording three substantially equal portions of the visible spectrum, again through the half-tone screen, enable successive printing of colors secondary in relationship to the primary color separation, and a replica in color of the original.
