

Cooperative Economic Insect Report, Vol. 22: April 7, 1972 (Classic Reprint) (Paperback)

By United States Department of Agriculture

FBC LTD, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Cooperative Economic Insect Report, Vol. 22: April 7, 1972 The forests in the intermountain States were plagued by a variety of insects in 1971. As usual bark beetles, particularly the mountain pine beetle, caused more timber damage than any other group of insects. Although overall mountain beetle activity was at the lowest level in several years, a large volume of lodgepole and ponderosa pine trees were killed. The most severe outbreak was on the Targhee National Forest in Idaho. Population of douglas fir beetle in southern Idaho were beginning to subside after remaining at epidemic levels during the last 2 years. The area infested by western spruce budworm increased on the Payette and Boise National Forests, but decreased on the Bridger National Forest. Natural factors were responsible for reducing douglas fir tussock moth populations in southern Idaho. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
