Reviews

Comprehensive information! Its this type of very good read. It is written in basic words instead of hard to understand. You are going to like how the article writer compose this pdf.

(Mabel Corwin)

THE LOGIC OF SCIENCE IN SOCIOLOGY

Aldine Transaction. Paperback. Book Condition: New. Paperback. 139 pages. Dimensions: 8.0in. x 5.4in. x 0.3in. The subject of this book is limited to the abstract form or logic of science (as applied particularly to scientific sociology). The chief aim is to compress, to simplify, and to organize into an easily understood and reasonably well-documented scheme some principal answers to questions such as: What makes a discipline scientific in the first place? What are theories, empirical generalizations, hypotheses, and observations; and how are they related to each other? What is meant by the scientific method? What roles do induction and deduction play in science? What are the places of measurement, sampling techniques, descriptive statistics, statistical inference, scale construction, tests of significance, grand theories, and middle-range theories? What parts are played by our ideas concerning logic, causality, and chance? What is the significance of the rule of parsimony? How do verbal and mathematical languages compare in expressing scientific statements? The intended use of this book goes beyond these abstract questions. The discussion presented here may serve a practical role in the sociology and history of science by providing a framework for reducing the enormous variety of scientific researches--both within a given field and across all fields--to a limited number of interrelated formal elements. Such a framework, it is hoped, may prove useful in assessing empirical relationships between the formal aspects of scientific work and its substantive social, economic, political, and historical aspects. Wallace identifies four ways of generating and testing the truth of empirical statements--authoritarian, mystical, logico-rational, and scientific, and considers each in depth. As he concludes, In science (as in everyday life) things must be believed to be seen, as well as seen to be believed; and questions must already be answered a little, if they are to be asked at all...
