Excerpt: .not only for himself, but also for the people he deals with. CHAPTER III ELECTRICAL GENERATOR AND MOTOR CONSTRUCTION Thus part of our subject, if fully treated, would fill the whole first three volumes and more. We have already treated of the elements of the subject in Vol. I.; we shall now deal more particularly with the practical constructions from the mechanical and wire-winding point of view. We will divide the subject into three large groups: (i) Continuous Current Machines; (2) Single Phase Alternating Machines; (3) Polyphase Alternating Machines. With the exception of polyphase machines, the motors and generators are similar machines reversible. On all of them there are two distinct elements. A field magnet or stator for projecting magnetic force; on the second part, the armature or rotor. Except in the case of the permanent magnet, some means of magnetising the field magnet or stator must be provided. And in the case of motors and generators, means for supplying current or producing current in the rotor, and of collecting current from the armature of a generator, must be provided. We will first study the individual parts and then the whole machine, beginning with magnets. The engineer s magnet is a ring, and has no poles. We have already seen in previous volumes that the polarity of a magnet is of no importance, except in the one case of the mariner s compass, and yet the text-books and teachers hang on to this polarity...
