Reviews

The book is fantastic and great. It is filled with wisdom and knowledge I am just easily will get a enjoyment of looking at a composed publication.

(Bradley Hahn)

MATHEMATICAL QUESTIONS AND SOLUTIONS IN CONTINUATION OF THE MATHEMATICAL COLUMNS OF THE EDUCATIONAL TIMES VOLUME 64

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 28 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1896 Excerpt: . . . figure, and (2) the respective probabilities of 0, 1, 2, 3 intersections, if three diagonals are drawn at random. Solution by H. Fortey. (1) In what follows, diagonals are not produced, and intersection means intersection within the polygon. (2) Let the polygon have n sides. Then the number of pairs of intersecting diagonals is C_4 , for each set of 4 angular points gives one pair. But the whole number of diagonals is $n(n-3)/2$, and the whole number of pairs of diagonals is $n(n-3)/2$; therefore the chance of a random pair intersecting is $C_4 / \binom{n(n-3)/2}{2}$. (3) In dealing with the question of 3 diagonals, let us first include the sides of the polygon amongst the random lines that may be drawn so that 3 random lines are not all (or even any of them) necessarily diagonals. (4) Now the 3 random lines may have their extremities at any 6, 6, 4, or 3 angular points of the polygon, and the types for each number of points when there are 3, 2, or 1 intersections, with the number of cases included in each type, are as follows: --(5) Therefore, if l_p be the number of triplets of lines which make p intersections, we see by inspection that $l_3 = C_6 - 12 \cdot 3 - C_6 - C_5 - 1$, $l_2 = 6 - C_{610} - MC_6 - 4 - C_4$. (6) But, remembering that both diagonals and sides are included in this calculation, let us see what deduction must be...
