RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 90 pages. Original publisher: Washington, D. C. : National Telecommunications and Information Administration, 2010 OCLC Number: (OCoLC)671751259 Subject: Radio -- Interference. Excerpt: . . . EXECUTIVE SUMMARY This report describes the results of radiated emission measurements on a radio-service denial device (called a jammer). The manufacturer temporarily provided the device to the National Telecommunications and Information Administration (NTIA) Institute for Telecommunication Sciences (ITS) Boulder laboratory for the purpose of such measurements. The device is designed to jam communication services in the 869-894 MHz (cellular) and 1930-1990 MHz (PCS) radio bands. Please note that the device does not carry any Federal Communications Commission (FCC) certification and its design and parts are idiosyncratic to the manufacturer. NTIA performed the measurements mostly via radiated emissions in a National Institute of Standards and Technology (NIST) radio-anechoic chamber. NTIA measured the devices emissions in both the frequency and time domains. NTIA performed spectrum measurements from 100 MHz to 6 GHz. This allowed the devices emissions to be measured up to the sixth harmonic of its lower-band (cellular band...

Reviews

The best book i at any time read. I am quite late in start reading this one, but better then never. I realized this publication from my dad and i advised this book to understand.

-- **Raina Simonis**

This book can be worth a read, and far better than other. I could comprehended every little thing using this published e pdf. You can expect to like how the blogger publish this pdf.
