Createspace Independent Publishing Platform, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.I know what you are thinking, How can there be anomalies in DNA? It is, essentially, ones and zeros made from 4 different nucleotides holding a bunch of sugar together. The sugars are Adenine, Thymine, Cytosine, and Guanine. To make it even less confusing, Adenine always attaches to Thymine and Cytosine always attaches to Guanine. It can't be faked or misunderstood unless someone really doesn't like the answers they get. Once that happens, the gloves are off and anything is considered ok. Those calling themselves scientists twist every bit of truth out of what they know to present a consensus theory that a group of special people can use to mold the minds of the populace. They claim man came out of Africa, they hide confirmation of only 2 races of human, they claim Erectus was the first human, they disregard alien DNA in the Paracas and Neanderthal, they silence the details of the Obaid and Vanara people, they claim Americans came from Russia on a stupid Ice bridge, they even try to claim that the larger brain of Neanderthal and Cro-Magnon did not mean they were smarter. The lies keep piling up to protect the Consensus theories by labeling just about everything as anomaly. This is destroying the minds of our children and we must force a new level of honesty. This book may help turn things around.
