

## Strengthening of Concrete Structures with Adhesive Bonded Reinforcement

Filesize: 9.58 MB

### ***Reviews***

*It is one of the best books. Better than ever, though I am quite late in starting to read this one. You won't feel monotony at any moment of the time (that's what catalogues are for regarding in the event you check with me).*  
**(Dr. Kristin Dickens)**

## STRENGTHENING OF CONCRETE STRUCTURES WITH ADHESIVE BONDED REINFORCEMENT

To download **Strengthening of Concrete Structures with Adhesive Bonded Reinforcement** eBook, you should refer to the link listed below and download the file or have accessibility to other information which are in conjunction with STRENGTHENING OF CONCRETE STRUCTURES WITH ADHESIVE BONDED REINFORCEMENT ebook.

Condition: New. Publisher/Verlag: Ernst & Sohn | Design and Dimensioning of CFRP Laminates and Steel Plates | The design and use of externally bonded CFRP strips, CF sheets and steel plates according to the German DAfStb guideline, which supplements the Eurocode. With design examples covering fatigue, creep, serviceability and ultimate limit state analysis for slabs, beams and columns. | Design and construction in existing contexts is becoming increasingly important, and often the structures - sometimes of historical interest - can be preserved easily and at minimum cost by employing strengthening measures. Existing concrete members can be strengthened by using adhesives to bond additional reinforcing elements onto or into those members. This book explains the design rules, together with their background, and uses examples to illustrate their use, specifically for slabs, beams and columns. Concrete member strengthening measures can take the form of, for example, flexural strengthening with externally bonded (surface-mounted) CFRP strips, CF sheets and steel plates, flexural strengthening with CFRP strips bonded in slits (near-surface-mounted reinforcement), shear strengthening with externally bonded CF sheets and steel plates, and column strengthening with CF sheets as confining reinforcement. The explanations and background information provided are mainly based on the new German guideline "Strengthening of Concrete Members with Adhesively Bonded Reinforcement" by the German Committee for Structural Concrete (DAfStb). This is the first European guideline to regulate this topic in the form of a supplement to the Eurocode. As it is planned to produce a document in a future Eurocode 2, the DAfStb guideline serves as a starting point. The authors are extensively involved in the planning, design, operation and inspection of buildings for preservation and reconstruction, and in the updating of European Technical Approval Guidelines (ETAGs) and design rules. Selected chapters from the German concrete yearbook are now being published in the new English "Beton-Kalender..."
