Various considerations determine the use of telescopic gasholders; such, for example, as want of room, or the defective nature of the ground, which does not permit of the construction of deep tanks. The Throat or Lute Ring Gorge).--It is well known that the two vessels which constitute the bell of a telescopic gasholder are connected by a lute or water-joint ring, which forms a continuity between them. This water-joint ought to have sufficient height to establish an equilibrium between the internal and external pressure; it ought further to have an excess of height to allow for the irregularities in level of the lute during the movement of the bell; and, finally, it ought to contain a further quantity of water to provide for any leakage, and for the loss by evaporation on hot days. The fulfilment of these conditions cannot be subject to fixed rules;...
