New Zealand Neuroptera; A Popular Introduction to the Life and Habits of May-Flies, Dragon-Flies, Caddis-Flies and Allied Insects Inhabiting New Zeala

By George Vernon Hudson

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm.

Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1904 edition. Excerpt: .wet mud, or sand, beneath the stone, and carefully smooths it within. During the course of a few days the larva becomes somewhat shrivelled, and after a week or so sheds its skin and appears as a pupa. This habit of leaving the water, just at the time when the shrinkage in the volume of the rivers occurs, is no doubt very beneficial to the insect as, unlike many other neuropterous pupae, it is able to imbibe air and thus escape destruction by drought. The pupa of *C. diversus*, in its natural curved position, measures about 1 inch in length. Its limbs closely resemble those of the perfect insect, except the wings which are, of course, rudimentary. The larval gills are replaced by a series of wart-like projections, situated on each side of the first eight segments of the abdomen. This pupa is not endowed...

Reviews

An exceptional book and also the font utilized was intriguing to read. This is for all who statte there was not a worth reading. It is extremely difficult to leave it before concluding, once you begin to read the book.

-- Prof. Tyson Hilpert

An extremely awesome pdf with perfect and lucid reasons. I have got go through and so i am certain that i will going to read again once again in the foreseeable future. I found out this ebook from my dad and i recommended this publication to understand.
