

Through the Looking Glass And What Alice Found There Volume 1899

Filesize: 3.75 MB

Reviews

*It is simple in study easier to comprehend. It is one of the most awesome ebook i have read through. You wont truly feel monotony at at any moment of your respective time (that's what catalogs are for concerning in the event you question me).

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 38 pages. Original publisher: Hampton, Va. : Institute for Computer Applications in Science and Engineering, NASA Langley Research Center ; Springfield, Va. : National Technical Information Service, distributor, 1990 OCLC Number: (OCoLC)60841924 Excerpt: . . . -11- of the slat. The average width of the elements on the airfoil surface is 0.0001 chord, resulting in cell aspect ratios of the order of 1000: 1 in these regions. The turbulence background mesh consists of one local structured mesh for each airfoil component, as depicted in Figure 12. The computed Mach contours are shown in Figure 14. For this case, the freestream Mach number is 0.5, the Reynolds number based on the chord is 4.5 million, and the incidence is 2.8 degrees. At these conditions, the flow is supercritical, and a shock is formed on the upper surface of the slat, as can be seen from the figure. The computed shock is somewhat diffuse, and an increased mesh resolution in this region would be required to obtain a crisper shock definition. However, the sudden thickening of the boundary layer as it interacts with the shock is evident from the computed Mach contours. A small recirculation region is also observed on the lower surface of the slat. A comparison of the computed surface pressure distribution with the experimental data is given in Figure 15. Computed and experimental values are seen to agree favorably in all regions, demonstrating a good prediction of the suction peaks and location of the slat upper surface shock. This solution required roughly eight CPU minutes on a single processor or a Cray-2 supercomputer, which corresponds to 75 million grid cycles on the finest grid, during which the residuals were reduced by approximately three orders of magnitude. To the author's knowledge, this represents the first compressible turbulent flow calculation for multi-element airfoil geometry using unstructured meshes. 8. CONCLUSION A method for solving viscous and inviscid flows about arbitrary two-dimensional configurations has been presented. An attempt has been made to keep the method as general as possible. The simultaneous use of multigrid and adaptive meshing. . . This item ships from La Vergne, TN. Paperback.
