Reviews

This book will never be easy to start on looking at but quite entertaining to read. It is actually packed with wisdom and knowledge It is extremely difficult to leave it before concluding, once you begin to read the book.
(Ms. Missouri Satterfield DVM)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 50 pages. Original publisher: Golden, Colo. : National Renewable Energy Laboratory, 2003 OCLC Number: (OCoLC)52935135 Subject: Biodiesel fuels -- Environmental aspects. Excerpt: . . . RESULTS Base Fuel Properties Base fuel properties and testing methods employed are listed in Table 3. Certification diesel has a cetane number of 47 and an aromatic content of 32 . The nominally 10 aromatic diesel has a cetane number of 48 and an aromatic content of 7. 5 . Note that this fuel is not a CARB reference diesel nor is it a fuel certified as emissions equivalent to CARB reference diesel. As a fuel with less than 10 aromatic content it meets the requirements for sale in California based on composition. Comparison of biodiesels and biodiesel blends with this fuel is intended to provide an estimate of suitability of any of these fuels for possible CARB certification. FT diesel has an extremely high cetane number, as is typical for these fuels. While not measured, the aromatic content of FT diesel is zero. For the biodiesel fuels all of the property specifications of ASTM PS121 (shown in Appendix A) are met. Soygold has a cetane number of 47; a value regarded as typical for a soy-derived biodiesel (1). The cetane number of Bio3000 is 56. The kerosene or No. 1 diesel is at the light end of the No. 1 diesel range, and may even meet the specifications of a jet fuel. The fatty acid makeup of the two biodiesels was also determined and these results are reported in Table 4. As expected, the yellow grease fuel contained significantly higher levels of saturated and monounsaturated compounds. The other column in Table 4 includes unidentified peaks in the chromatogram...
