

Tomorrow's Child: A Case Study of Cognitive Evolution

By Dr Terry Triffet

Createspace, United States, 1998. Paperback. Book Condition: New. 203 x 133 mm. Language: English . Brand New Book ***** Print on Demand *****.Tyler Trent, the young man whose letters are featured herein, describes one of his revealing visions as a dream within a dream. In a similar sense this is a book written within a book; the outer shell a brief account of the author's research in the cognitive and neurosciences, the inner core a summary of their correspondence extending from Tyler's undergraduate days to his untimely death. In effect the letters constitute his autobiography, edited in such a way as to highlight the unusual mental powers that originally inspired the author's research and helped him develop his well-known model of the brain processed, powers which he comes to believe may represent the next stage of human evolution. A single case study like this can hardly prove such a belief to be true. But the highly original contributions to computer technology Tyler's intuitive gifts enabled him to make in his fifteen years of professional life, plus the fact that throughout history many of our most influential ideas have originated in the same way, strongly suggests that...
