## Areal Geology of the Western Mojave Desert California

By U. S. Department of the Interior

CreateSpace Independent Publishing Platform. Paperback. Book Condition: New. This item is printed on demand. Paperback. 162 pages. Dimensions: 11.0in. x 8.5in. x 0.4in. The Mojave Desert in southeastern California is a wedge-shaped region having its apex toward the west. This report deals with the western part of the desert a part that is characterized by interior drainage and is sharply delineated by mountain ranges on both the southwest and northwest. The part mapped geologically includes about 7,200 square miles between latitudes 34°34' and 35°30' N. and longitudes 117° and 119° W., or parts of Kern, Los Angeles, and San Bernardino Counties. The center of the region lies about 70 miles airline north-northeast of Los Angeles. Fieldwork was done during the spring, autumn, and winter months from 1952 to 1955 and during short intervals from 1956 to 1959. This report and map represent part of a geologic investigation by the U. S. Geological Survey of the known and potential deposits of borate minerals in the southern California desert regions. The primary purpose of this report and the geologic map is to provide a geologic background for the exploration for possible concealed borate deposits in the western Mojave Desert, based upon...
