

Genetic analysis of seed yield and other attributes in lentil

Filesize: 9.71 MB

Reviews

It is one of the best publications. It is definitely simplistic but exciting in the 50% of the eBook. I am very happy to let you know that this is basically the greatest publication I have ever gone through within my own existence and could be the greatest PDF for ever.
(Dr. Anya McKenzie)

GENETIC ANALYSIS OF SEED YIELD AND OTHER ATTRIBUTES IN LENTIL

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Detection of genetic components of variation for some biometrical traits in lentil (*Lens culinaris Medik.*) | The present investigation revealed that the magnitude of additive gene action has been found to be higher for plant height, biological yield per plant, harvest index, protein content and tryptophan content therefore early generation selection by using pedigree method will be useful for the improvement of these traits. However, for days to 50% flowering, days to 75% maturity, fertile nodes per plant, pods per plant, seed yield per plant and 100-seed weight, preponderance of dominance variance was observed which imply that selection should be deferred to later generations by using bulk or bulk-pedigree method of breeding. The promising cross combinations like PL-406 x L-649 can be exploited to develop early maturing genotypes and PL-406 x L-651 could be exploited to develop high yielding cultivar in lentil, whereas Vipasa x L-652, PL-406 x L-354 can be exploited for the improvement of quality traits in lentil | Format: Paperback | Language/Sprache: english | 124 pp.
