PHOTOVOLTAIC (PV) PRICING TRENDS: HISTORICAL, RECENT, AND NEAR-TERM PROJECTIONS (PAPERBACK)

Createspace Independent Publishing Platform, United States, 2014. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. The installed capacity of global and U.S. photovoltaic (PV) systems has soared in recent years, driven by declining PV prices and government incentives. The U.S. Department of Energy's (DOE) SunShot Initiative aims to make PV cost competitive without incentives by reducing the cost of PV-generated electricity by about 75 between 2010 and 2020. This summary report-based on research at Lawrence Berkeley National Laboratory (LBNL) and the National Renewable Energy Laboratory (NREL)-examines progress in PV price reductions to help DOE and other PV stakeholders manage the transition to a market-driven PV industry, and to provide clarity surrounding the wide variety of potentially conflicting data available about PV system prices. It provides a high-level overview of historical, recent, and projected near-term PV pricing trends in the United States, focusing on the installed price of PV systems. More detailed analyses will be published in other reports.
