Local Therapies for Unresectable Primary Hepatocellular Carcinoma: Comparative Effectiveness Review Number 114

By U. S. Department of Health and Human Services

CreateSpace Independent Publishing Platform. Paperback. Book Condition: New. This item is printed on demand. Paperback. 328 pages. Dimensions: 11.0in. x 8.5in. x 0.7in. This comparative effectiveness review evaluates local hepatic therapies for patients with unresectable primary hepatocellular carcinoma (HCC) who are not candidates for surgical resection or liver transplantation. Here we describe the epidemiology and staging of HCC, as well as currently available treatment strategies. We also discuss the current practice guidelines and the impetus for this review. Hepatocellular carcinoma is the most common primary liver tumor. It is the fifth most common cancer and the third leading cause of cancer death worldwide. Overall 5-year survival rates for HCC are less than 10 percent in Europe and the United States. The main etiology of HCC is chronic infection with the hepatitis B and hepatitis C viruses. Approximately 4 million individuals in the United States are chronically infected with hepatitis C virus, and the annual incidence rate of HCC among patients with hepatitis C related cirrhosis is estimated to be between 2 and 8 percent. Unlike the case with most solid tumors, the incidence of and mortality rate due to HCC are projected to increase worldwide in the next 20 years, primarily due...

Reviews

This publication will never be straightforward to get going on looking at but really fun to see. This can be for all those who statte that there had not been a worth looking at. You wont really feel monotony at at any moment of your own time (that's what catalogs are for about should you request me).
