

Programming Concepts in C

By Robert Burns

XLIBRIS. Paperback. Condition: New. 244 pages. Dimensions: 8.9in. x 5.9in. x 0.7in. Programming Concepts in C is one in a series of books that introduce the basic concepts of computer programming, using a selected programming language. Other books in the series use languages like Java and Python, but all focus on concepts and not on any particular language. The presentation of the material is the same in each language, and much of the text is identical. Code samples are specific to the selected language, and some unique language features are unavoidably included, but the presentation is largely language-independent. A unique feature of the book is that it explains how to acquire, install, and use freely available software to edit, compile, and run console programs on just about any system, including Windows and Mac. Its examples use command line compiling, so that the presentation remains focused on programming concepts and avoids becoming a training tool for a specific IDE. The three-part organization of material starts with the basics of sequential processing, then adds branching and looping logic and subprograms, and ends with arrays and objects. It turns a beginner with no programming experience into a programmer, prepared to continue their training in...
