Noncommutative Geometry, Arithmetic, and Related Topics: Proceedings of the Twenty-First Meeting of the Japan-U.S. Mathematics Institute (Hardback)

By -

JOHNS HOPKINS UNIVERSITY PRESS, United States, 2012. Hardback. Condition: New. Language: English . Brand New Book. This valuable collection of essays by some of the world's leading scholars in mathematics presents innovative and field-defining work at the intersection of noncommutative geometry and number theory. The interplay between these two fields centers on the study of the rich structure of the adèle class space in noncommutative geometry, an important geometric space known to support and provide a geometric interpretation of the Riemann-Weil explicit formulas in number theory. This space and the corresponding quantum statistical dynamical system are fundamental structures in the field of noncommutative geometry. Several papers in this volume focus on the field with one element subject, a new topic in arithmetic geometry; others highlight recent developments in noncommutative geometry, illustrating unexpected connections with tropical geometry, idempotent analysis, and the theory of hyperstructures in algebra. Originally presented at the Twenty-First Meeting of the Japan-U.S. Mathematics Institute, these essays collectively provide mathematicians and physicists with a comprehensive resource on the topic.

This ebook may be worth a go through, and superior to other. I could comprehend every thing out of this published e.pdf. It is extremely difficult to leave it before concluding, once you begin to read the book.
