The distribution of statures among men of a given weight is given by reading down in the vertical columns. It will be observed that the entries become larger in the middle of the table; this is because men of medium stature and medium weight are much commoner than those of extreme stature or those of extreme weight. Thus, in Table I the largest entry is 18,930, which means that that number of men out of 868,445 had a stature about 67 inches and 135-139. inclusive, pounds. This combination was then the commonest one among the early recruits into the United States Army. Table I answers the question, What proportions of men of a given stature, such as 69 inches, fall into each of the different classes of weight? These proportions per 1,000 are obtained by reading along the...
