THE CONSTRUCTION OF SILOS (CLASSIC REPRINT) (PAPERBACK)

Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from The Construction of Silos The Silo must be Air-tight. - The manufacture of silage is a series of fermentation processes. The more air at the disposal of the bacteria, the further the fermentations will progress; and if their effects are too far reaching, putrefactive bacteria continue the work of the acid-producing ones. And the result is rotten silage. The Silo must be Deep enough - Depth is essential in order to have the corn under good pressure, causing it to pack well and leave little air in the interstices between the cut fodder. The loss from spoiled silage in the case of deep silos is smaller than in that of shallower ones, in proportion to the amount stored, and as less surface is exposed the loss is also smaller while the silage is being fed.
