MIT Press Ltd, United States, 2008. Hardback. Book Condition: New. 162 x 122 mm. Language: English . Brand New Book. How will the world work in the post-toil, post-coal future? Our transition could take the form of disastrous collapses in economic, political, and economic systems--or of a radical reinvention of energy. We could relapse into a new Dark Ages, or we could shift to a new economic model and international order that s not based on (the appropriately named) fossil fuels but on renewable energy. No matter what, global warming and resource scarcity will force us to do something. To avert environmental and economic disaster, we ll have to think beyond the weekly fluctuations in the price of gasoline and consider larger matters. In Fuel, writers and artists imagine the transition to a carbon-free future: an architect plans Velo-city, a network of elevated bikeways; a designer models a perfectly internalized, tail-chasing energy system; an urbanist examines the new Oil Cities in Dubai and Saudi Arabia; a photographer documents the social and environmental damage done by the oil industry in Nigeria; and an architect proposes that oil rigs be turned into sanctuaries for marine and avian wildlife. Reading Fuel, we read our current energy moment in the broader context of a range of possible futures.
