

Regulation of the exchange activity of Dbl-family proteins

By Yohe, Marielle

Condition: New. Publisher/Verlag: VDM Verlag Dr. Müller | Auto-inhibition, intermolecular interactions and phosphorylation in the regulation of Dbl-family proteins | Dbl-related oncoproteins are guanine nucleotide exchange factors (GEFs) specific for Rho-family GTPases and typically possess tandem Dbl (DH) and pleckstrin homology (PH) domains that act in concert to catalyze exchange. The exchange activities of many Dbl-proteins are regulated by phosphorylation or constitutively activated by truncations preceding their DH domains. However, exact mechanisms of regulation remain poorly understood. The current literature regarding the activation and inhibition of the exchange activity of the human Dbl-family proteins is reviewed here, with a focus on general mechanisms of regulation common to many of these proteins. | Format: Paperback | Language/Sprache: english | 108 pp.

Reviews

An incredibly awesome publication with perfect and lucid reasons. It can be written in simple phrases and not confusing. I am just delighted to let you know that this is actually the very best publication I actually have studied during my very own lifestyle and could be the best publication for actually.

-- Paula Gutkowski

A brand new e book with a new perspective. I could comprehend every little thing using this written e publication. I am quickly will get a satisfaction of reading through a written ebook.
