William James is widely regarded as America s greatest philosopher. He is also considered to be the father of modern psychology. The Principles of Psychology took him 12 years to write. He considered psychology a natural science that required analysis of feelings, desires, cognitions, reasoning, and decisions according to their own features and dynamics, in the same way that one would explain building a house by looking at its component parts. The Principles of Psychology is one of the few 19th century works on the subject to be cited continuously to this day. A classic work.
